

**CLAIM AMENDMENTS**

Claims 1-20 (cancelled).

Claim 21 (new): A glove for treating on a work surface; comprising:

a glove body, which is adapted for receiving a hand of a user, having a palm portion and finger portions extended therefrom; and

a surface treatment arrangement, which comprises:

a treatment pad, adapted to perform a first treating action, provided at an upper side of said palm portion of said glove body, wherein said treatment pad comprises a loop fastener as a scouring layer on said palm portion of said glove body for performing a cleaning action as said first treating action on said work surface; and

a treatment member, adapted to perform a second treating action, comprising a fastener detachably fastened with said treatment pad to hold said treatment member at said palm portion of said glove body, wherein said treatment member is shaped and sized that said treatment member is gripped by said finger portions of said glove body to retain said treatment member at said palm portion of said glove body so as to perform said second treating action, wherein said treatment member has a hooking side forming as said fastener thereon and an opposed sponging side such that when said fastener is detachably fastened with said treatment pad, said treatment member is mounted at said palm portion of said glove body that said sponging side of said treatment member is positioned on said palm portion of said glove body for performing a cleaning action as said second treating action on said work surface;

thereby, said user is able to securely grip said treatment member within said palm of said user by using said fingers and said user is free to use said fingers while said treatment member is held at said palm via said treatment pad.

Claim 22 (new): The glove, as recited in claim 21, wherein said treatment member is cut into a predetermined shape and size to be securely gripped by said finger portions of said glove body so as to fit on said palm portion of said glove body.

Claim 23 (new): A glove for treating on a work surface; comprising:

a glove body, which is adapted for receiving a hand of a user, having a palm portion and finger portions extended therefrom; and

a surface treatment arrangement, which comprises:

a treatment pad, adapted to perform a first treating action, provided at an upper side of said palm portion of said glove body, wherein said treatment pad comprises a loop fastener as a scouring layer on said palm portion of said glove body for performing a cleaning action as said first treating action on said work surface; and

a treatment member, adapted to perform a second treating action, comprising a fastener detachably fastened with said treatment pad to hold said treatment member at said palm portion of said glove body, wherein said treatment member is shaped and sized that said treatment member is gripped by said finger portions of said glove body to retain said treatment member at said palm portion of said glove body so as to perform said second treating action, wherein said treatment member is made of hook fastener having a predetermined coarseness adapted to perform a rubbing action as said second treating action, such that said fastener is integrally formed as said treatment member to detachably fasten with said treatment pad;

thereby, said user is able to securely grip said treatment member within said palm of said user by using said fingers and said user is free to use said fingers while said treatment member is held at said palm via said treatment pad.

Claim 24 (new): The glove, as recited in claim 23, wherein said treatment member, which is ball shaped, is sized to be securely gripped by said finger portions of said glove body so as to fit on said palm portion of said glove body.
